

# How are different materials made?

# Making Materials

In our last lesson we looked at how we can change the shape of some materials by bending, twisting, pulling and pushing.

Today, you are going to be learning about the different processes materials go through in their production: glass, paper and brick.

Do you know how glass, paper and brick are made?

Choose one of the videos to watch and then write about the different steps involved in making that material.

Listen out carefully for any of the words we explored yesterday: squash, bend, twist, stretch.

Which other ways are the materials changed?

#### **How is paper made?**

See how paper is made with this video from BBC Teach.

#### **How is glass made**

See how glass is made with this video from BBC Teach.

#### **How are bricks made?**

See how bricks are made with this video from BBC Teach.
