

Tuesday 23rd February 2021 OLI: To understand differences between living things.
Look at the different animals and try to match the correct fact to each one of them.
Afterwards, guess which country these animals live in and look at it on the globe.

They mainly eat bamboo shoots and leaves and they eat those for nearly 12 hours a day.

They produce milk that can make very nutritious cheese and yogurt.

They live where there are lots of trees and bushes but some people keep them also as pets.

Their luxurious coat keeps them cosy in the cold mountains where they live. For extra warmth they also cuddle each other. In the summer several groups join together to form huge troops of up to 600.
