

Geography – Lesson 1

We are going to be focussing on three different topics this half term in geography. Earthquakes and volcanoes, the seaside and mountains. For the next two weeks we will learn about earthquakes and volcanoes. Do you know how they are caused? Watch the videos and then read the PowerPoint, then fill in the worksheet on how earthquakes are formed. Use the word bank to help you with your answers.

Labelling the volcanoes and earthquakes of the world – Lesson 2

Today you are going to plot some major earthquakes and volcanoes on a world map. To do this accurately you will need to use longitude and latitude coordinates. Please read through the PowerPoint slides to show you how to do this properly. There are also a couple of videos to remind you about what they are below. Feel free to sing along to the last one.
