

Year 1 Term 2
Geography
Animals around the World
(Our journey around the world)

Over the next few weeks we are going to look at different animals living around the world, especially in their native countries and continents.

Week 7

Lesson 1

Maps of the world.

Let's label the 7 continent
and the 5 oceans

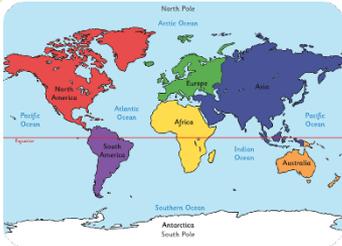

Lesson 1

OLI: To name and locate the continents and oceans of the world.

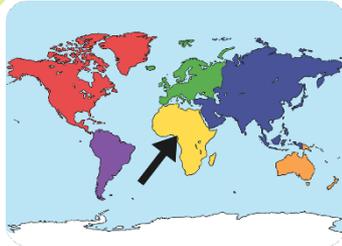

Success Criteria

- I can say the names of the 7 continents of the world.
- I can begin to name the 5 oceans in the world.
- I can use an atlas, map or globe to locate the continents and oceans of the world.
- I can label a world map accurately.

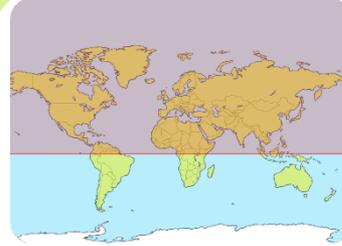

Key Words

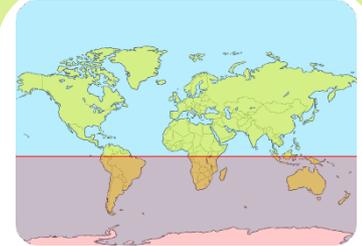

world map

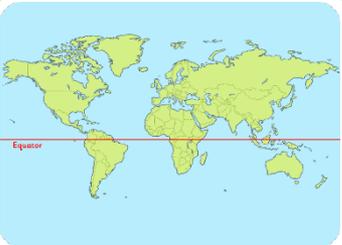

continent

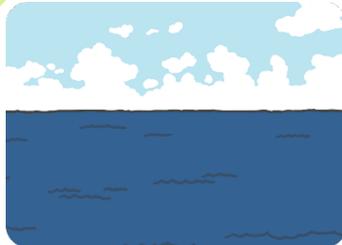

Northern Hemisphere

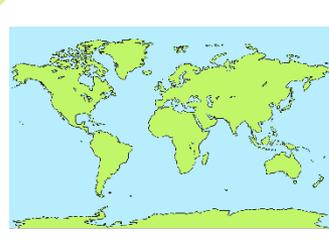

Southern Hemisphere

equator

ocean / sea

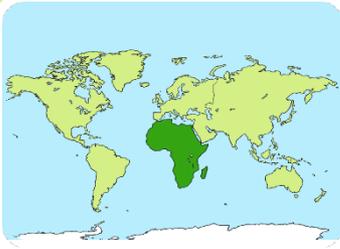

land

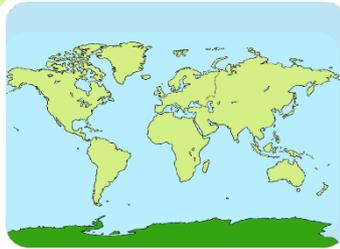

sphere
(round)

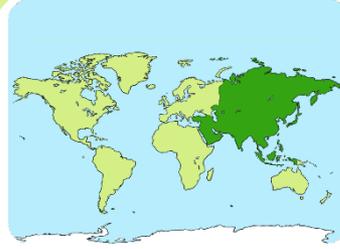

Key Words - Continents

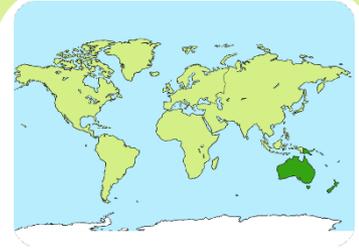

Africa

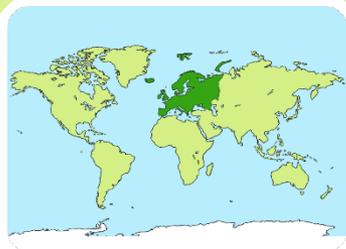

Antarctica

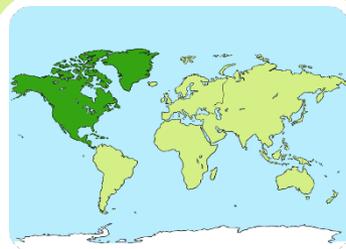

Asia

Australia

Europe

North
America

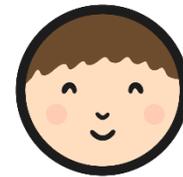

South
America

Key Words - Oceans

Why does it say Pacific Ocean twice?
Think about the 3D shape of the world.

What Do I Already Know?

- 1** What is a continent?
- 2** Can you name any continents of the world?
- 3** We live in the UK – What continent is the UK in?
- 4** Can you name any of the main oceans of the world?
- 5** Countries are hotter that are near the _____?

The Earth from Space

Our Wonderful World

But what about the Arctic?

We have studied the Arctic before in Reception. Where is it?

It is the North Pole!

What continent is the Arctic in?

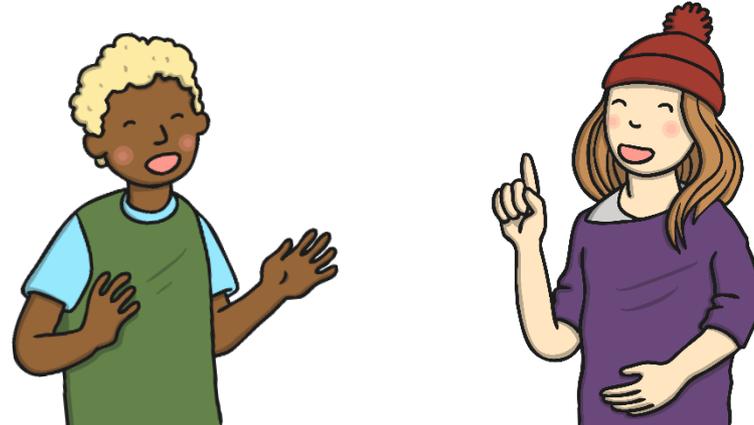

The Arctic is actually part of 3 different continents; North America, Europe and Asia.

North America (including Alaska, Canada and Greenland)

Europe (including Iceland, Finland, Norway and Sweden)

Asia (Including Russia)

Make a Mnemonic

Can you think of a rhyme (mnemonic) to remember the continents of the world?

E.G Eat An Apple After A Night-time Snack

Europe, Antarctica, Asia, Africa, Australasia, North America and South America

Round and Round

Work with someone to explore a globe, a map, an atlas or the map on the previous slide.

Can you find:

an area of
land

seas or
oceans

the equator

where you live

an island

A continent

a capital city

Challenge: What are the differences between a globe and a map?

Lesson 1: Mapping the World

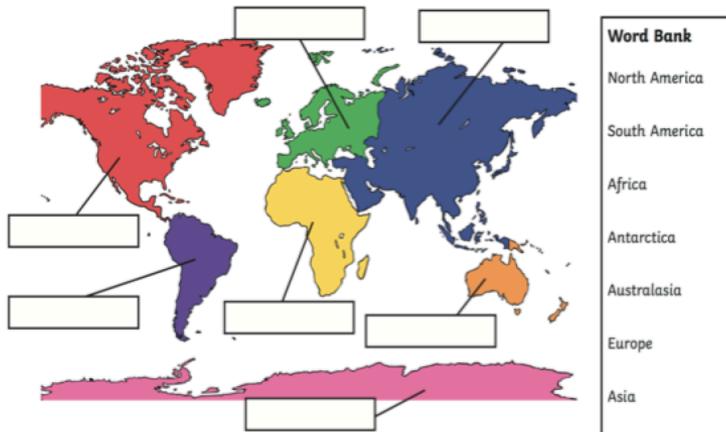

Using an atlas, can you find, colour and label:

- *The seven main continents
- *The five oceans of the world

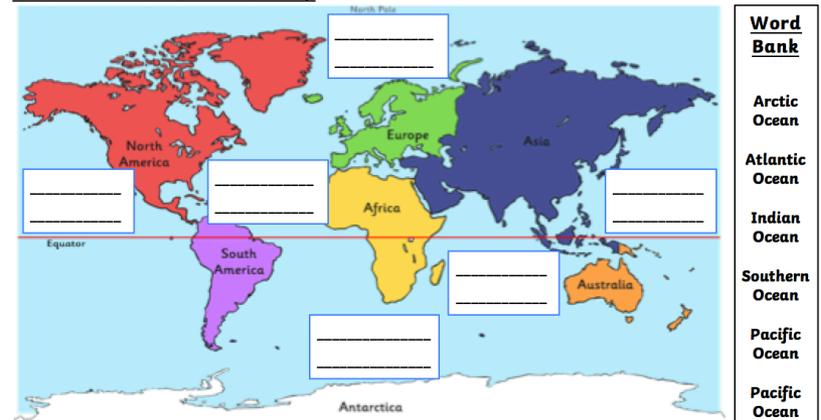

1st map Chilli Challenge: Can you find the North and South Pole and The Equator?

2nd Map Chilli challenge: Why is the Pacific Ocean written twice?

OLI: to name and locate the 7 continents on a world map.

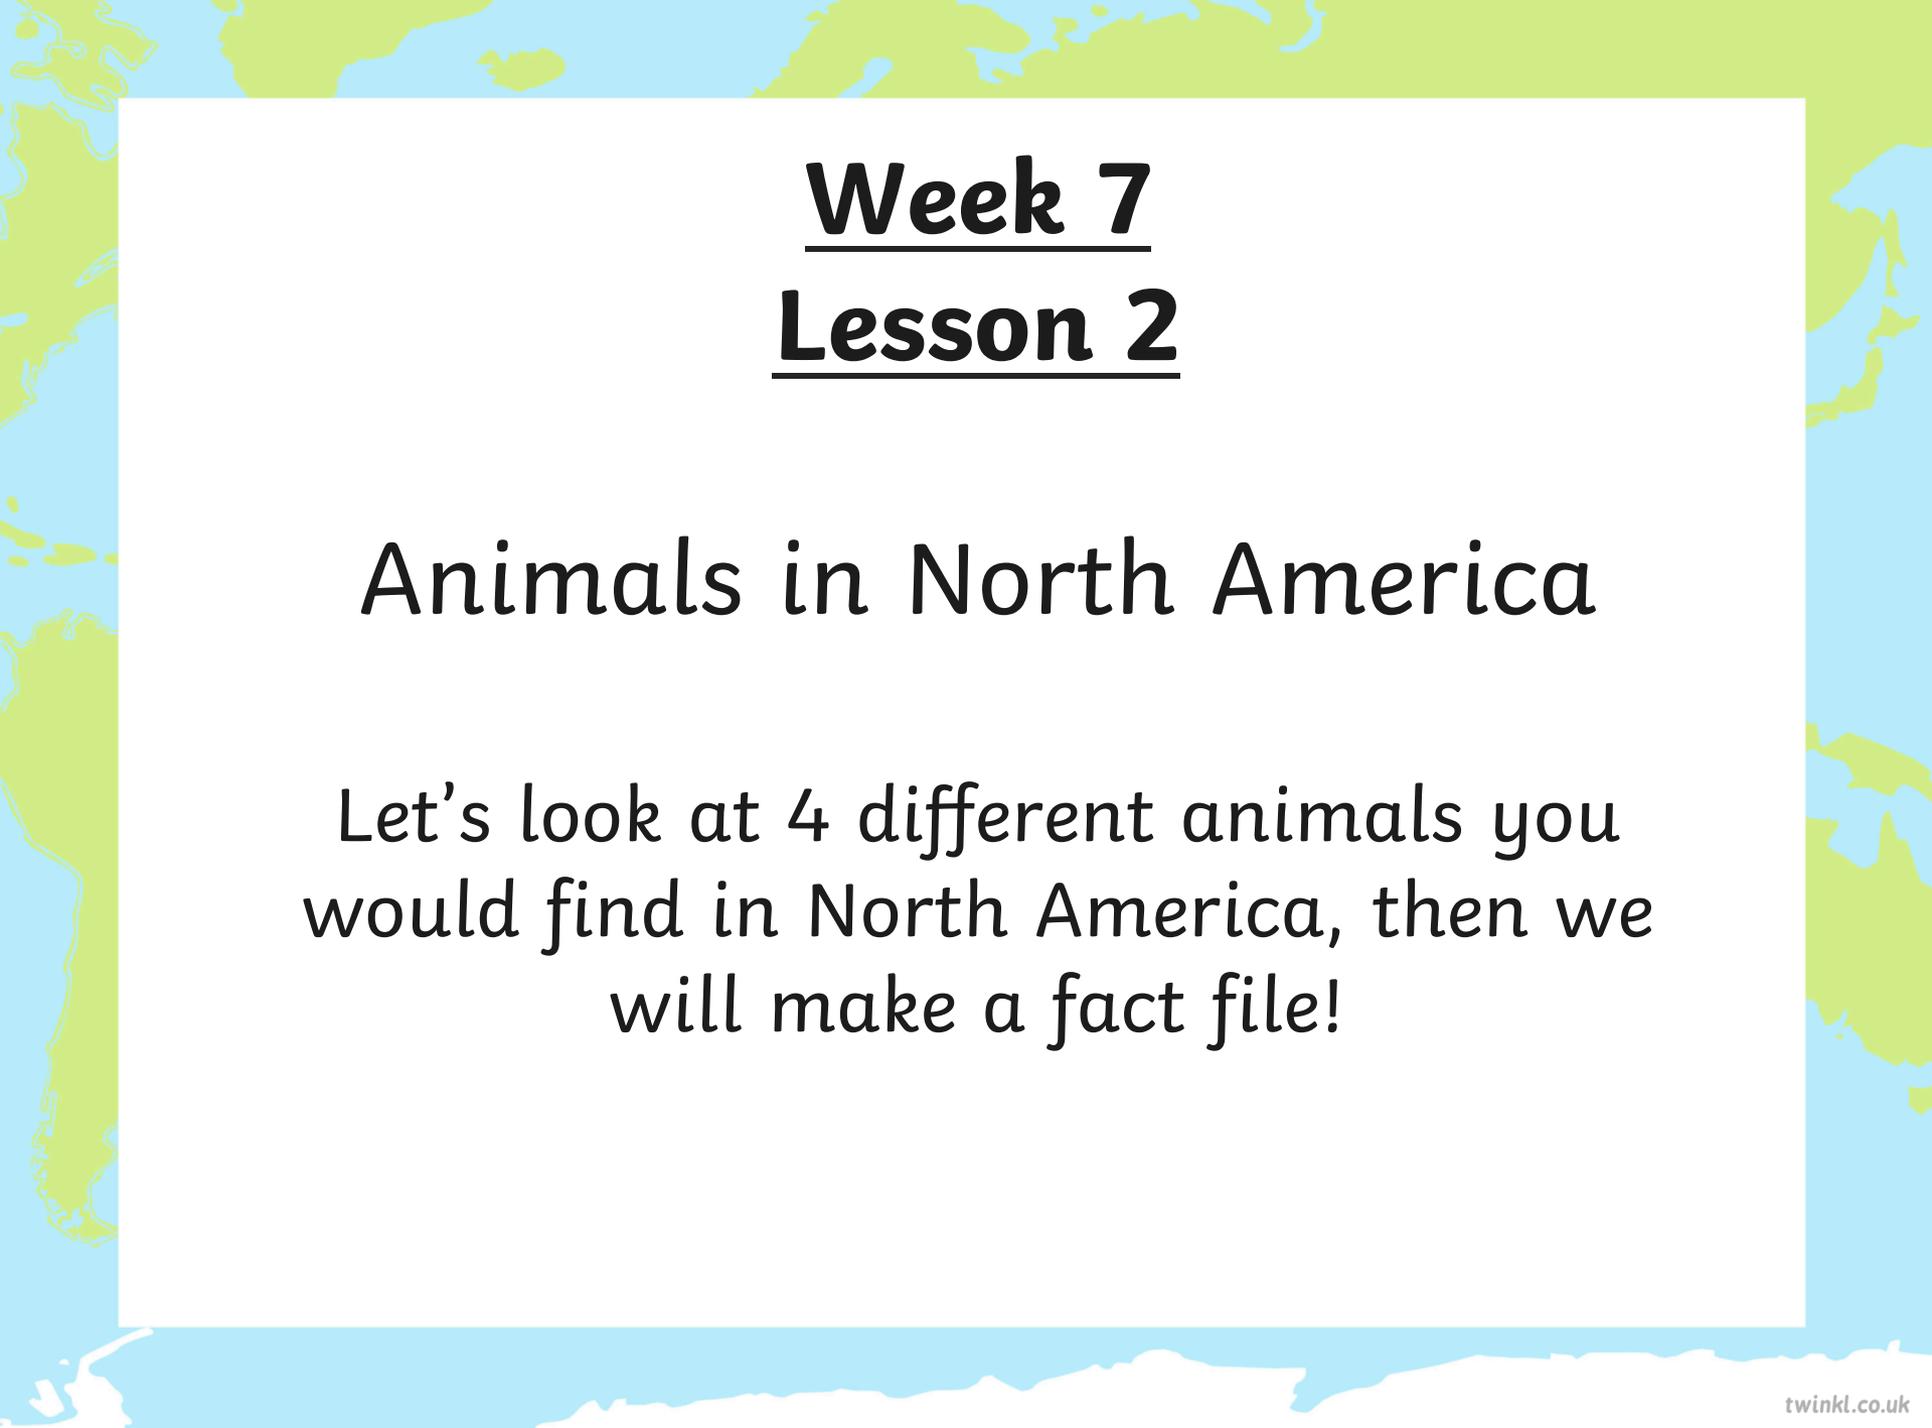

OLI: to name and locate the 5 oceans on a world map.

➡ Chilli challenge: Why is Pacific Ocean written twice?

.....

.....

Week 7

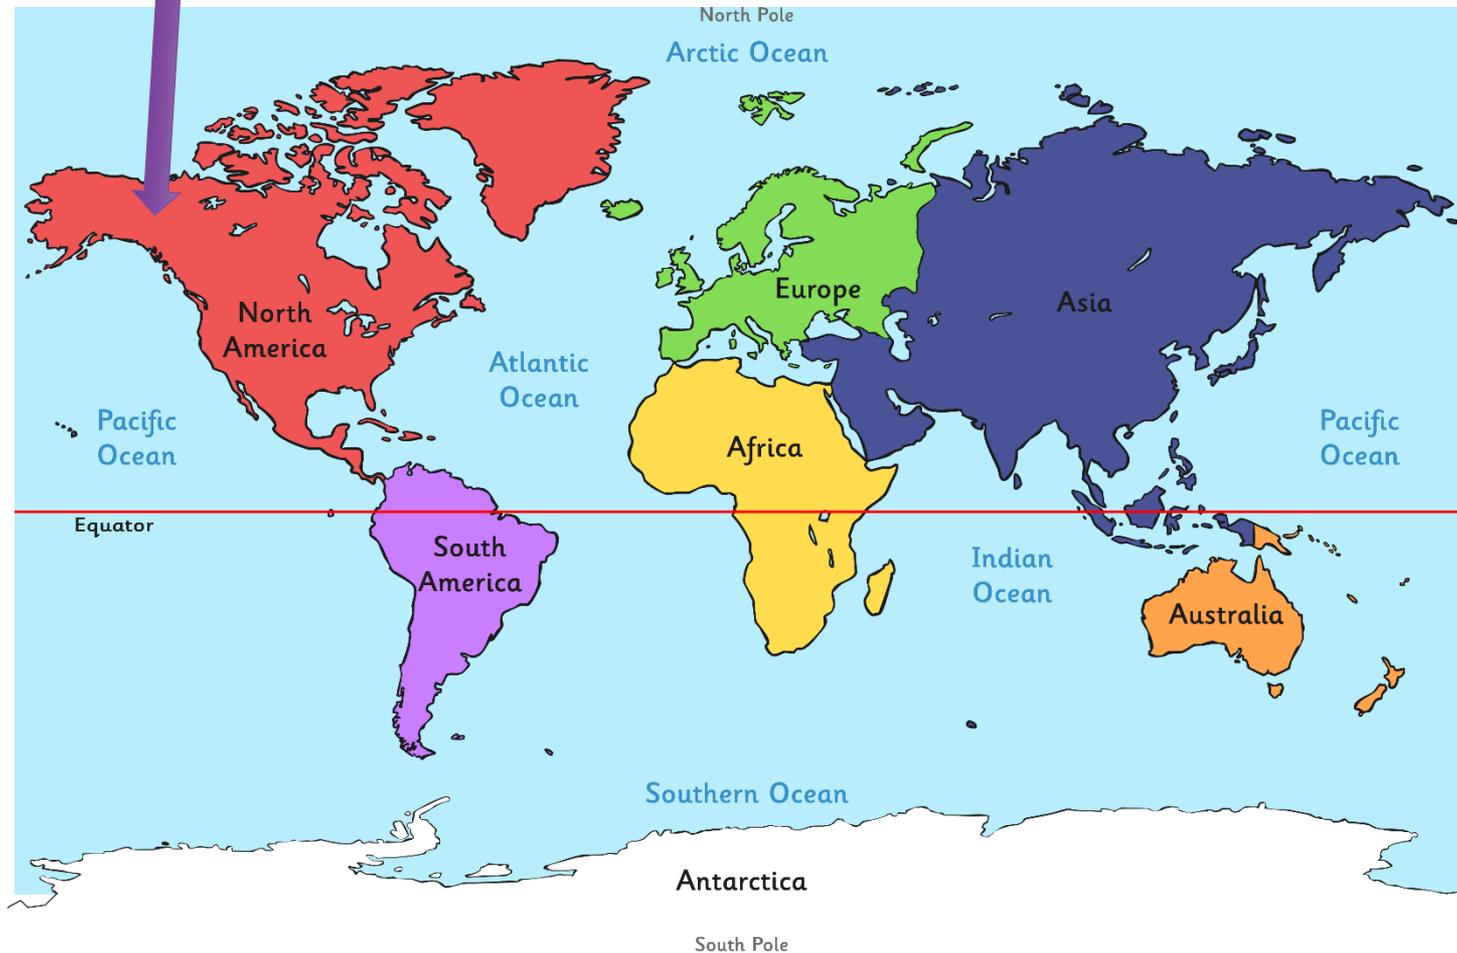

Lesson 2

Animals in North America

Let's look at 4 different animals you would find in North America, then we will make a fact file!

Lesson 2

Animals in North America

North America

alligator

beaver

moose

brown bear

Alligator

Alligators are reptiles.

They lay eggs.

Alligators eat any meat but mostly fish, birds and turtles.

They have lived on earth for millions of years.

They live in the southern parts of North America such as Louisiana and Florida.

They have a powerful bite but their jaw muscles are very weak. An adult human can hold open an alligator's jaw.

Adult males can be over 3 metres long.

They were once an endangered species.

Beaver

Beavers are found by streams, ponds, rivers and lakes.

They feed on trees and tree bark.

They live in colonies with their families.

Beavers build dams and lodges.

Dams and lodges are built for protection against predators.

They can stay underwater for up to 15 minutes.

Their feet and tails help them to swim really well.

They are nocturnal and work at night.

Young beavers are called kits.

Brown Bear

Brown bears are also known as grizzly bears.

They eat grass, fruit, insects, roots and bulbs of plants and when hungry enough they will eat small animals.

They live in forested mountain areas and near rivers.

In autumn they eat huge amounts of food so they can hibernate through the winter.

Adult males can be over two metres tall.

They hibernate in dens which are like a 'bedroom' at the end of a tunnel..

Moose

Moose are the largest member of the deer family.

Male moose are called bull moose.

Bull moose shed their antlers during the winter and grow new ones every year.

Female moose are called cows.

Moose have a piece of hairy skin that hangs under the throat. This is called a bell.

Moose have a hump.

They are around 7 feet tall.

Moose are great swimmers.

Your task:

OLI: to make a fact file.

On our journey around the world, we are stopping in North America! Write a fact file about one of their native animals. Use the PowerPoint to give you ideas.

My North American native animal is _____

They live...

They eat...

Facts about my animal...

Picture of my animal...
